## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-8 and 10-21 are allowed.
2. The following is an examiner's statement of reasons for allowance: Davey et al. do not teach a temperature compensation method that includes locating a bridge circuit on a physical property sensor substrate that includes at least one heating element and a plurality of resistors, a plurality of compensating resistors and at least one temperature independent compensating resistor for compensating a temperature coefficient of resistance of the at least one heating element; simultaneously driving an imbalance of the bridge circuit to a zero value and a supply voltage to a level required to stabilize the heating element at a required temperature rise above an ambient temperature, where the heating element comprises a thin-film heating material; adjusting the resistance value of the temperature independent resistor to compensate the temperature coefficient of resistance of the heating element; and dynamically compensating for a temperature coefficient of resistance of the thin-film heating material and a temperature a temperature dependence of the plurality of resistors and the heating elements of the bridge circuit components and a temperature dependence of a physical property using the plurality of compensating resistors of the bridge circuit, as shown in claims 1, 14 and 15.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
